Permanent Address: Bhavnagar , Gujrat 364260

Residential address: Prahladnagar - Ahmedabad Gujrat 380015

Professional Summary:

- Over **1.5+ years** of experience in Design and Development, and implementation of various client-server enterprise applications in Python using a web framework like **Django, Django REST Framework (RESTful APIs)**.
- Good knowledge of **OOPs** (Object Oriented Programming) and applying Object-Oriented principles in the Software Development Life Cycle.
- Experienced in Backend applications using Python/Django and SQL/MySQL/NoSQL.
- Well versed with the design and development of the presentation layer for web applications using technologies like HTML5, CSS3, and TypeScript, JavaScript & jQuery.
- Also having basic knowledge of React JS.
- Experience in working with Django **ORM**.

- Experienced in working with **developing Web APIs** and some **critical APIs for wallet and payment related modules** by **maintaining high security standards**, excellent knowledge to **handle input/output JSON structure as per the requirements and easy to handle it from any Front-End technology**.
- Basic Experience in working with **Web Scraping** and **Web automation** using **Selenium**.
- Possess good communication, interpersonal and analytical skills, and a highly motivated team player with the ability to work independently and Team environments.

Key Skills:

- **Languages/Scripting:** Python, JavaScript, HTML5, CSS3, SQL, ReactJS.
- **Python Frameworks:** Django, Django REST Framework
- **IDE'S:** Visual Studio
- **Web Services:** REST API
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB (Basic)
- **Tools:** GitHub, GitLab, Docker, Jira, Trello
- **Operating Systems:** Linux Variants, Windows Variants

' Experience:

Python/Django Developer, LogicRays Technologies Pvt. Ltd, Ahmedabad, Gujarat, India (June 2023 - Present)

- Working as Python developer by handling all the client side projects related to this technology such as on Django and REST Framework, building crawlers, other software development tasks too.

Skills & Expertise:

- **Technical Skills:** Python, Django, Django REST Framework, Server level configurations, Data Structures, Ms Office, HTML, CSS, JavaScript, jQuery, React.
- **Organizational skills:** Leadership Qualities, Management, Entrepreneurship, Team work.

Career Projects:

1. Billing System

- A system that's easy to use and keeps track of invoice of customers order. By adding a strong authentication system, including a two-step verification with options like Google Authenticator.
- Effectively managed CRUD operations of the customer, seller, category, and product info.
- Furthermore, the system streamlines the invoicing process by allowing sellers, registered as organizations, to generate PDF invoices with QR codes based on customer, category, and product information. Cloud integration facilitates direct upload to Dropbox, while also enabling sellers to email invoices directly to customers.
- Designed the Database structure from scratch to achieve desired requirements.
- Generated PDF invoices can be directly uploaded to a seller's Dropbox account within a specific directory.
- Configured email integration to share invoices to customers directly within a single click.
- Integrated Stripe payment payment gateway for handling wallet and transactions.

Technology Stack: Django, Django REST Framework, PostgreSQL, Swagger, Dropbox API, Twilio, Stripe Payment Gateway, JIRA (PMS).

2. ETIAS

- It is an automated system to apply for a VISA for European countries by taking care of the latest rules and regulations.
- This comprehensive web application leverages Django for the backend, coupled with HTML, CSS, JS, and jQuery for a seamless and responsive frontend.
- Integrated the Image OCR to read and extract Text data from the image (i.e. Passport Image) and store that information in the Database effectively
- Configured the Paypal for the collecting VISA Fees. Integrated the system to manage the discounts.
- Manage the subscription based access for the commercial organizations.
- Configured additional features (UserWay) for physically disabled people (like Increase Font size, color contrast, Text Spacing, Pause animation etc)

Technology Stack: Django, Django Rest framework, MySQL, HTML, CSS, JavaScript, Tesseract (For OCR), GitHub, Digital Ocean

3. OneHeartMarket

- This project is similar to LinkedIn, but the major difference is that LinkedIn is for tech persons, whereas this project is for non-tech persons.
- OneHeartMarket has functionality like creating a user profile to register yourself and a business profile to register your business.
- Normal user profiles will be considered as job seekers, and the business profiles will be considered as recruiters.
- Job seekers can apply to posted jobs by business users, create CVs, save jobs and business profiles, and make posts, etc.
- Also, it has functionality like following, unfollowing, and blocking users, similar to Instagram.
- Additionally, it has functionality like LinkedIn posts to post feeds with likes and comments (1 level nested) (with the functionality to report).
- For business profiles, there are multiple sub-admins to handle features based on users' roles and permissions.
- Implemented strong authentication JWT via DRF. Also, for some payment parts, used the Stripe payment gateway.
- Integrated the notification system using Firebase.

Technology Stack: Django, Django Rest framework, MySQL, React, Firebase, Stripe, GitHub

4. MyCMS

- MyCMS is a Content Management System (CMS) that allows users to manage their content through a customized Django admin panel.
- The project is designed to provide a user-friendly interface for content creators to manage their content, and a front-end interface for visitors to view and interact with the content.
- The Django admin panel has been customized to provide a seamless experience for content creators to create, edit, and manage their content.
- The front-end interface is built using Bootstrap, HTML, CSS, and JavaScript, and features basic searching and sorting functionality for visitors to easily find and view content.
- The project uses Django as the backend framework, providing a robust and scalable architecture for managing content.
- The project also utilizes MySQL as the database management system, ensuring efficient and reliable data storage and retrieval.
- The front-end interface is designed to be responsive and user-friendly, providing an optimal viewing experience across various devices and browsers.
- The project has been implemented with a focus on security, using Django's built-in security features to ensure the integrity and confidentiality of user data

- Client have basic requirement so I have hosted this project on python <https://pythonanywhere.com/>

Technology Stack: Django, Django Rest framework, MySQL, React, Firebase, Stripe, GitHub

5 MediSys

- This project is a clinic management software designed to help small clinics efficiently manage patient records and medication purchases.
- The software allows doctors to store and manage patient information, including basic details, and track medication purchases with details such as name, quantity, and price.
- The software features a user-friendly interface built using Python's tkinter library, making it easy for doctors and clinic staff to navigate and use.
- The software includes basic CRUD (Create, Read, Update, Delete) functionality, allowing users to add, view, edit, and delete patient records and medication purchases.
- Additionally, the software includes searching and sorting functionality, enabling users to quickly find and organize patient records and medication purchases.
- The software also includes basic authentication, ensuring that only authorized users can access and manage patient records and medication purchases.
- The project utilizes matplotlib and numpy libraries for data visualization and numerical computations, providing a robust and efficient solution for clinic management.
- The software is designed to be intuitive and easy to use, reducing the administrative burden on clinic staff and allowing them to focus on providing quality patient care.

Technology Stack: Python, tkinter, matplotlib, numpy
